

ABSTRACT

A CPU of an image display apparatus transmits user manipulation to an input unit to a wireless unit of a data processing apparatus through a wireless unit, and a CPU of the data processing apparatus processes
5 corresponding to the user manipulation. The CPU of the data processing apparatus generates image data, and transmits to the wireless unit of the image display apparatus through its own wireless unit, and the CPU of the image display apparatus displays this image data in its display unit. Accordingly, the information processing system divided into the data
10 processing apparatus and image display apparatus, and capable of carrying easily the image display apparatus can be presented.
